THE JAN FAN

INDUSTRIAL DUTY FEATURES

- **Energy Saving Fans** - Jan Fan's heavy duty energy efficient pedestal fans and beam mounted fans have now become even more energy efficient. As a true air circulator specialist, Jan Fan has developed new technology for its energy efficient pedestal fans and various other fans that allows maximum air circulation.

The new Smart Fan **energy saving** module, known for its ability to turn fans off has proven to be extremely energy efficient by saving energy and excessive motor wear. The smart fan device can be used with all ceiling fans, pedestal fans and portable fans manufactured by Jan Fan. Another feature of our energy saving fans is our fan motors. The 2 speed, ¼ h.p., T.E., 240 watt motors have **maintenance free** ball bearing components that help to conserve energy.

Each of our energy efficient fans is **competitively priced** with cooling fans of far less quality.

- 20", 24", 30" sizes **use same fan motor and mounts.**
- **5 YEAR Industrial Warranty** - all heavy duty industrial air circulators.
- **Heavy duty, spring type steel fan blades**, with hub on front for easy access of 2 set screws.
- Patented **hinged, positively locking safety guards**, with keyed rear guard. Safety Yellow color for high visibility.
- Designed for **quickest assembly** of our heavy duty industrial fans and air circulators.
- Choice of 2 speed, patented, recessed, protected **pull chain** or patented **trouble-free drop cord rocker** switch.
- Patented **Quick Disconnect Kit** for tool-less, fast fan head take down, for cleaning or repair.
- **Repair parts** are always available and interchangeable with previous industrial air circulators designed by Jan Fan.

Huge inventories of our heavy duty energy saving fans maintained year round.
